1. Many inmates in local jails are also deportable illegal aliens. Because of that, U.S. immigration officials often ask jails to hold these individuals so the federal government can take custody when their sentences are done. Some jails comply with those requests; some don't and simply release the criminal alien back into the local community.

A bill called the No Sanctuary for Criminals Act clarifies the law so that police and sheriffs who run the local jails will know they can and should comply with these requests. The bill has already passed in the House of Representatives, and is awaiting a Senate vote. Do you support or oppose this part of the No Sanctuary for Criminals Act?

Subsets have a larger margin of error than the whole data set. As a rule we do not rely on the validity of very small subsets of the data, especially sets smaller than 50-75 respondents. At that size subset we can make generalizations, but in these cases the data is more qualitative than quantitative

Subsets have a larger margin of error than the whole data set. As a rule we do not rely on the validity of very small subsets of the data, especially sets smaller than 50-75 respondents. At that size subset we can make generalizations, but in these cases the data is more qualitative than quantitative

2. If a city or town refuses to cooperate with federal immigration authorities and releases a deportable criminal alien back onto the local streets, and that alien then commits a violent crime, the No Sanctuary for Criminals Act would give the victims and their families the right to sue the local jurisdiction that released the person. Do you support or oppose this part of the No Sanctuary for Criminals Act?

Subsets have a larger margin of error than the whole data set. As a rule we do not rely on the validity of very small subsets of the data, especially sets smaller than 50-75 respondents. At that size subset we can make generalizations, but in these cases the data is more qualitative than quantitative

Subsets have a larger margin of error than the whole data set. As a rule we do not rely on the validity of very small subsets of the data, especially sets smaller than 50-75 respondents. At that size subset we can make generalizations, but in these cases the data is more qualitative than quantitative
