Subsets have a larger margin of error than the whole data set. As a rule we do not rely on the validity of very small subsets of the data, especially sets smaller than 50-75 respondents. At that size subset we can make generalizations, but in these cases the data is more qualitative than quantitative

Some argue that as the U.S. economy reopens, limiting the admission of new immigrants and foreign guest workers would help laid-off American workers reclaim lost jobs. Others argue that foreign workers are essential to restarting the economy. Which of these claims most closely reflect your views?

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Limiting admission of new immigrants and guest workers will improve the chances of laid-off American workers being rehired.	317	52.6	52.6	52.6
	Maintaining high levels of immigration and guest worker admissions will help the economy recover more quickly.	193	32.0	32.0	84.6
